

Pyramidal European Hornbeam

Pyramidal European Hornbeam - *Street Tree*: Deciduous tree to 30-50 ft. Shape is initially columnar but soon becomes oval or vase-shaped, and very symmetrical with no central leader. Leaves are evenly distributed which results in a neat, sheared look.

Arbor Vitae

American Arborvitae: Conifer, evergreen tree that prefers deep, well-drained soil. When established it can withstand considerable heat and drought. The variety 'Smaragd' is narrow, columnar or cone-shaped and does not discolor in winter.

Mock Orange

Mock Orange: Deciduous shrub, to 8 ft high. Shape is stiffly upright and when older has peeling bark. Flowers are white, double, numerous, and fragrant, blooming in late spring (May-June). Easy to grow. Takes sun with few soil requirements although best in fertile clay soil.

Concha Ceanothus

Concha Ceanothus: Broadleaf evergreen shrub with a compact shape to 3 ft high. Spread is greater than height. Flowers are dark blue in tight clusters, somewhat reddish in bud, blooming in early summer. Likes sun and tolerates summer water.

MISS KIM Korean Lilac

Miss Kim Korean Lilac: Deciduous shrub, to 6-8 ft tall with similar width, larger with age. Flowers in paired clusters, purple in bud then light blue in color and fragrant. Sun or part shade. Cultivar is “free of mildew all summer and turns Burgundy red in autumn for a delightful display.”

Rockrose

Snow Fire Rockrose: Evergreen shrub, to 4-5 ft high with a similar spread and rounded form. Reddish stems on leaves. Flowers are white with burgundy-red blotch at the base of each petal. Likes sun and well-drained soil. Drought hardy and can be pruned.

Snowmound Spirea

Snowmound Spirea: Deciduous shrub, to 3-5 ft tall with equal width in an upright, rigid, rounded form. Flowers are white in rounded clusters and cover branches in spring (May-June). Sun to part shade, does best in well-drained soil with summer water.

Potentilla Tangerine

“Tangerine” Bush Cinquefoil: Broadleaf deciduous shrub, to 2-4 ft tall and similar width. Shape is low, rounded, and bushy. Flowers are bright orange, solitary or in small groups and blooms for a long period. Likes sun or light shade and is tolerant of most well-drained soils. Tough plant, often left unpruned and maintains a good shape.

David Viburnum

David Viburnum: Broadleaf evergreen shrub, to 3-5 ft. Shape is a low, compact, neat mound. Leaves are thick, leathery, dark blue-green, oval. Pink flower buds in spring turn to dull white flowers in clusters. Small, oval, bright blue fruit held on red pedicels. Both male and female plants are needed to obtain fruit. Likes light sun or partial shade.

Dull Oregon Grape

Dull Oregon Grape: Native species, evergreen ground cover, slow growing, to 2 ft. Leaves are bristle-toothed, glossy green, and may show purple in winter. Flowers are small and yellow in elongated, erect terminal clusters (April-June). Fruit is small, blue with a waxy coating. Prefers partial shade or shade.

Crinkle-Leaf Creeper

Crinkle-leaf Creeper: Evergreen groundcover which forms a dense, low mat, to about 12 inches high. Leaves are leathery, crinkled surface, broadly oval-rounded. Flowers are white and fruit is bright yellow to orange. Likes sun to part shade, tough ground cover, good for erosion control.
